PROFESSIONAL SUMMARY

B.Tech Computer Science Engineering (Data Science) undergraduate at Vignan Institute of Information Technology, Visakhapatnam (CGPA: 9.2/10). Proficient in Python, machine learning, data analysis, and full-stack web development with Flask. Delivered 3+ end-to-end projects on real-world datasets including ML-based crop yield prediction, Power BI business dashboards, and a full-stack networking platform. Seeking an AI Engineer, Data Science, or Software Engineering internship to create measurable impact in a product-driven environment.

EDUCATION

B.Tech in Computer Science Engineering (Data Science) — Vignan Institute of Information Technology, Visakhapatnam

Aug 2024 – May 2028 (Expected) | CGPA: 9.2 / 10

TECHNICAL SKILLS

Languages:	Python, C, SQL, JavaScript
ML / AI:	Regression, Classification, NLP, Scikit-learn, Feature Engineering, Model Evaluation
Data Analysis:	Pandas, NumPy, EDA, Data Cleaning, Jupyter Notebook, Google Colab
Visualization:	Power BI, Matplotlib, Seaborn, Excel (Power Query, DAX)
Web & Backend:	Flask, HTML5, CSS3, REST APIs, SQLite, Git, GitHub, VS Code

PROJECTS

TrustLink – Profile Verification & Networking Web App | github.com/MANIDEEP-2006/trustlink_landing

Tech Stack: Python · Flask · HTML5 · CSS3 · JavaScript · REST APIs · SQLite

- Developed a full-stack web platform enabling verified professional networking — users create trust-scored profiles, establish peer connections, and validate credentials through a structured authentication system.
- Architected a RESTful Flask backend with session-based authentication, user registration, and profile management modules, ensuring secure data storage and smooth request handling using SQLite.
- Built a fully responsive frontend with HTML5, CSS3, and JavaScript incorporating dynamic content rendering, interactive UI elements, and mobile-optimised layouts.

GreenCrop – Crop Yield Prediction System | github.com/MANIDEEP-2006/green-crop-yield-detection

Tech Stack: Python · Scikit-learn · Pandas · NumPy · Matplotlib · Seaborn

- Engineered an end-to-end machine learning pipeline for crop yield prediction on 10,000+ row agricultural datasets, applying Random Forest and Linear Regression algorithms via Scikit-learn.
- Improved model accuracy by ~18% through systematic feature engineering, normalization, and hyperparameter tuning; validated performance using RMSE and R-squared evaluation metrics.
- Executed thorough data preprocessing — missing value imputation, outlier treatment, and feature scaling — reducing data noise and enhancing overall model reliability.

Sales Analytics Dashboard – Business Intelligence | github.com/MANIDEEP-2006/business-sales-dashboard

Tech Stack: Power BI · Excel · DAX · Power Query · KPI Design · Data Cleaning

- Designed an interactive multi-page Power BI dashboard tracking revenue trends, regional KPIs, and sales performance across 5+ integrated business data sources.
- Cleaned and transformed raw data using Excel Power Query and custom DAX measures, reducing manual reporting effort by ~40% while improving accuracy and consistency.
- Delivered bar charts, line charts, funnel visuals, and dynamic KPI cards with period-over-period comparisons to support data-driven executive decisions.

ACHIEVEMENTS & EXTRACURRICULARS

- Achieved 2-Star rating on CodeChef; actively participated in 30+ competitive programming contests across CodeChef, LeetCode, and HackerRank — sharpening skills in algorithms and data structures.
- Maintained a CGPA of 9.2/10, ranking among top performers in the CSE (Data Science) department at Vignan Institute of Information Technology.
- Independently built 3+ full-stack and machine learning projects on real-world datasets, demonstrating consistent self-driven initiative beyond the academic curriculum.
